ELPHINSTONE

UNDERGROUND RELIABILITY

**WR820 UNDERGROUND
AGITATOR 10M³**

RELIABILITY AND PERFORMANCE IN TOUGH CONDITIONS.

Machine Safety

With safety as a priority, the WR820 is engineered with onboard machine diagnostics for rapid fault identification, increasing the availability and productivity of the machine. Fitted with a standard ROPS/FOPS open cabin, the WR820 is also available with an optional air-conditioned, enclosed cabin. Combined with the front suspension and optional air-ride seat, the ergonomic, user-friendly intuitive controls, and excellent visibility provide unrivalled comfort for the operator. The automatic brake retarder provides superior and reliable braking capability.

Maintenance and Serviceability

A swing-out radiator grill and hinged engine bonnet cover provide safe access for maintenance. Ground level access to service points reduce risk and time spent checking the machine status.

Machine Application

The WR820 chassis is heavy-duty multipurpose platform designed for various underground mining applications. Machine application includes bulk transport of concrete to back fill voids, continuous pours and construction. Excellent top speed at full capacity improves the cycle time and allows the machine to travel at the same speed as the production fleet resulting in increased production. The Caterpillar powertrain provides haulage speeds on grade equivalent to production equipment resulting in maximum productivity across the mining fleet. The bowl has a maximum capacity of 10m³ and allows mixing of wet or dry product with variable speed control.

DELIVERING POWER AND CONTROL AT FULL CAPACITY.

Machine application

- ▶ Bulk transport of concrete to back fill voids, continuous pours and construction.
- ▶ Transport of shotcrete to a shotcrete machine in a new development.
- ▶ Excellent top speed at full capacity improves the cycle time and allows the machine to travel at the same speed as the production fleet resulting in increased production.

Wet or dry product loading

The 10m³ (13yd³) capacity agitator bowl can handle wet or dry product due to the machines ability to program mix and transit speeds which results in greater mixing versatility.

Water tank (optional)

Optional stainless steel water tank. On-board water storage to enable alterations to the batch or for wash down purposes. Setup includes 15m (50ft) retractable hose reel rear mounted, hydraulic water pump and external water connection.

Chemical agent tank (optional)

Optional stainless steel chemical dosing tank equipped with transfer pump. On-board chemical tanks to enable addition of agent in-situ at the work site.

Load sensing hydraulics

A load sensing variable displacement pump and pressure compensating system continually monitor hydraulic power requirements, then provides power based on demand.

Dual loading access available

Loading of the agitator bowl can be achieved vertically via the chute or horizontally via conveyor (optional).

Agitator control panel

Located on the rear right hand side of the machine, the agitator control panel features a tethered pendant control, push-button emergency stop and bowl slump meter. A fire suppression actuator is available as an option.

Mixer

- ▶ Electro/Hydraulically controlled for mixing and unloading.
- ▶ Manual bowl controls at ground level.
- ▶ Quick disconnect hydraulic fittings on bowl motor for emergency discharge with external power pack.
- ▶ Slump meter.
- ▶ Emergency stop switch at ground level on both sides of the machine or at the top of the access platform - if fitted.

Optional features include:

- ▶ High mounted chute camera.
- ▶ Chute extensions.
- ▶ Ground level bowl guards.
- ▶ High volume, low pressure water pump and hose reel.
- ▶ Low volume high pressure water pump and hose reel for machine washdown.
- ▶ Chemical agent tank.

STRENGTH AND SUPERIOR BRAKING PERFORMANCE.

Heavy duty front frame

The robust, heavy duty, purpose design again utilises high tensile steel to reinforce the frame in high stress areas. With an average plate thickness of 20mm (0.8in), the frame includes belly guard access and front suspension A-frame and cylinder mounting points.

Front axle mounting and suspension

The WR820 is fitted with front suspension as standard to provide optimal operator comfort. The setup includes a robust A-frame design fitted with Caterpillar nitrogen charged suspension cylinders, providing controlled axle oscillation and vertical dampening.

Rear frame strength

The box section structure of the rear frame uses high tensile steel with an average thickness of 12mm (0.47in) in high stress areas of the frame. The increased width of the frame allows for lower positioning of the agitator bowl reducing the overall height and centre of gravity.

Bonnet and covers

The engine and radiator are easily accessible at ground level and via the service platform. Both are protected by a hinged bonnet and covers, bolt-on radiator cover and a swing-out grill.

Agitator bowl

The 10m³ agitator bowl is constructed from wear resistant plate with integrated empty bowl lifting points at the front and rear. Bowl inspection hatches are positioned on the left and right hand side of the bowl and easily accessible at ground level.

Agitator bowl drive motor and gearbox

The WR820 agitator bowl features a transmission commonly used world wide in other cement mixing applications and has proven to be reliable and easily serviced.

Major advantages of the transmission include:

- ▶ Low-speed radial piston hydraulic motor.
- ▶ Variable speed output ranging from 0-19rpm.
- ▶ Up to 10 dB noise reduction: environmental friendly.
- ▶ Increased efficiency: up to 0.5L (0.13gal) fuel saving per operating hour.
- ▶ Tougher: improved robustness, increased lifetime, and doubled main bearing lifetime.
- ▶ Life time oil filling: easier maintenance and cost savings.
- ▶ Vibration isolation: absorption via elastomer unit results in improved driving comfort.
- ▶ Quick connect fittings on bowl motor for easy change over to auxiliary hydraulic power supply.

OPERATOR ENVIRONMENT

COMFORTABLE AND EASY TO OPERATE.

Two cabin configurations available

Fitted with a standard open cabin, the WR820 is also available with an optional air-conditioned, enclosed cabin (pictured above). The modular cabin is resiliently mounted on the truck chassis, reducing vibration for greater comfort and a quieter ride. The enclosed cabin features ergonomics for operator comfort, user-friendly intuitive controls, and excellent visibility.

The cabin includes the following features:

- ▶ ROPS/FOPS certified design.
- ▶ Mechanical suspension seat standard.
- ▶ Enclosed operator station available as an option with air conditioning and cabin pressurisation.
- ▶ Seatbelt, 2-point retractable lap with optional occupancy indicator.
- ▶ Emergency stop inside the cabin.

Engine protection system

An engine protection system is fitted that will shut down the engine if low oil pressure, low coolant level, high engine temperature or low engine temperature conditions are experienced.

Cab mounting

The modular ROPS/FOPS cabin is resiliently mounted on the truck chassis, reducing vibration for greater comfort and a quieter ride.

Monitoring controls

Conveniently located and easy-to see gauges and displays make monitoring machine systems as simple as possible. The gauges provide a constant display of vital machine functions, including engine coolant temperature, transmission oil temperature, engine oil pressure, engine speed, vehicle speed and fuel level.

Machine health monitoring system

The monitoring system and alarm strategy provides a 3-tier warning and shutdown functionality alerting the operator of any abnormalities and automatically limits the machine's functions.

Steering column

The steering column can be adjusted to an ergonomic position for maximum operator comfort by tilting or extending the column.

SAFETY FEATURES

OPERATOR SAFETY IS OUR PRIORITY.

Machine isolation

All engine and machine isolation functions are conveniently located on one panel accessible from ground level. Switches have been designed to incorporate the requirement for the site tag in/out machine isolation process.

- ▶ Battery isolation switch.
- ▶ Starter isolation switch.
- ▶ Jump start receptacle.
- ▶ Fire system activation (optional).

Cabin protective structure

The operator cabin has an integrated Rollover Protective Structure (ROPS) certified to ISO 3471:2008 and Falling Object Protective Structure (FOPS) certified to ISO 3449:2005.

Handrails

Handrails are fitted standard in accordance with ISO 2867:2011. All handrails are painted green and designed for 3-point access to cab and machine.

Steering

Full hydraulic controlled steering via opposed cylinders at the hitch. Secondary emergency steering is also provided as standard.

Braking

Service and park brakes are spring applied wet disc enclosed brakes. Braking systems meet ISO 3450:2011.

Additional safety features

- ▶ Anti-skid step surfaces.
- ▶ Inertia reel retractable seat belt.
- ▶ Steering frame lock.
- ▶ Electrical wiring segregation from all hydraulic hosing.
- ▶ Fire resistant wiring.
- ▶ Firewall / heatshields.
- ▶ Machine interlocks (Battery and Starter) for additional protection.
- ▶ Integrated fire suppression systems (optional).
- ▶ Hydraulic hosing covered with burst protection sleeves (optional).
- ▶ Door ajar warning (Operator Presence) systems.
- ▶ Door lighting for better step visibility.
- ▶ Window egress cord for ease of cab window removal.
- ▶ Rear view camera (optional).
- ▶ Park brake interlocking.
- ▶ Empty bowl lifting points and bowl rotation lock mechanism.
- ▶ Wheel chocks.

Service access

Easy access to daily service points simplifies servicing and time spent on regular maintenance procedures.

Ground level access

Allows convenient servicing to tanks, filters, lubrication points and compartment drains.

Interlock

If the operator fails to apply the park brake prior to exiting the cab, the interlock system will detect the absence of operator input and apply the park brake, neutralise the steering, implements and transmission.

ENGINE ARRANGEMENT

DELIVERS POWER, PERFORMANCE AND DURABILITY.

C11 engine

The Cat C11 Tier 3 uses Caterpillar's breakthrough ACERT™ Technology to meet exhaust emission reduction standards. It features efficient fuel delivery, air management and electronic control for high productivity and exceptional service life.

Engine design

The four-stroke engine provides efficient fuel combustion. Precise engineering and thorough testing assure durability, reliability and power. Built-in serviceability and excellent fuel economy lower operating costs.

ACERT™ technology

Caterpillar optimises engine performance while meeting EPA Tier 3 regulations. ACERT™ Technology reduces emissions during the combustion process by using advanced technology in the air and fuel systems, in conjunction with integrated electronics. The Caterpillar engine meets emission regulations at the combustion source rather than recycling exhaust gases.

ADEM A4 engine control module

The ADEM A4 module controls the fuel injector solenoids to monitor fuel injection. It also provides automatic altitude compensation, and will not allow the engine to start until it has oil pressure, acting as cold start protection and a form of pre-lube.

Maintenance

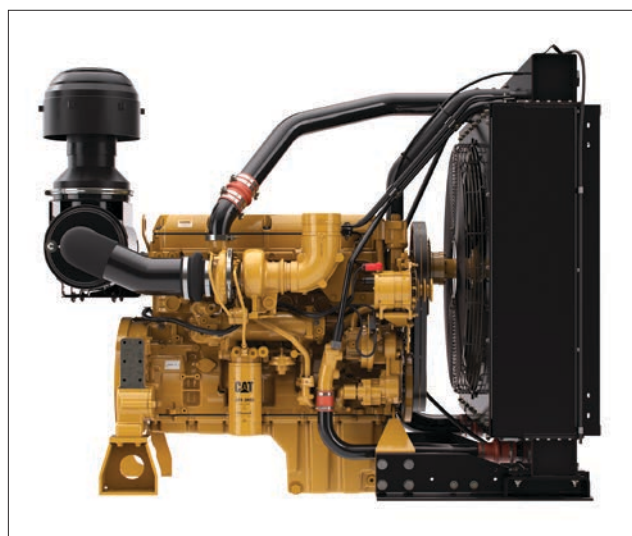

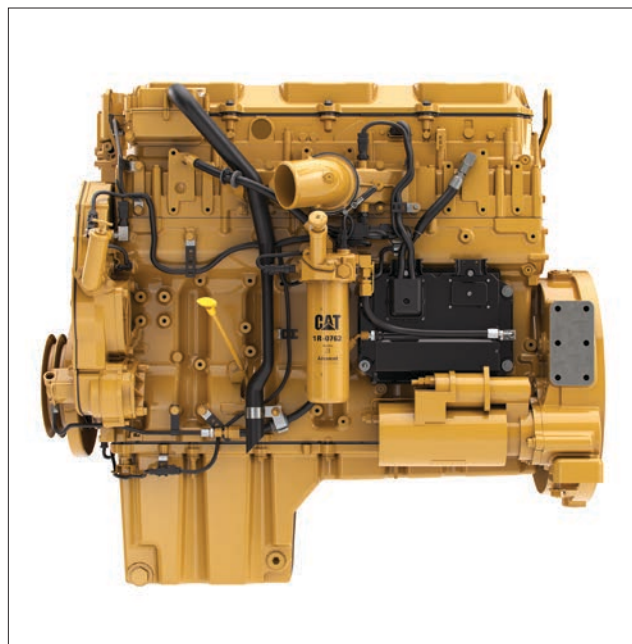

The machine is equipped with Caterpillar high efficiency oil filters, whose design doubles efficiency without increasing the change interval. They provide clean oil to the engine, reducing wear on all lubricated surfaces.

Engine protection system

An engine protection system is fitted that will shut down the engine if low engine oil pressure, low coolant level, or coolant over temperature conditions are experienced.

Commonality

The Caterpillar C11 engine is found in several Caterpillar products and applications such as Medium Wheel Loaders, Excavators, Motor Graders, Marine and Industrial services. This means the WR820 shares component commonality across many applications, providing the highest level of reliability and durability, as well as superior parts availability worldwide through the Caterpillar Dealer Network.

PERFORMANCE AND RELIABILITY IN TOUGH CONDITIONS.

Caterpillar four-speed transmission

The field proven Cat power shift countershaft transmission easily matches engine power to the load size and ground conditions.

Torque converter

The large, heavy-duty torque converter maximizes the productivity of the entire drive train. The torque converter is matched to the Cat C11 engine for excellent rimpull and performance.

Lock-up clutch

The integral lock-up clutch allows the machine to operate in converter drive for greater rimpull, or direct drive for high efficiency hauling and faster travel speeds. Direct drive capability allows up to 15% higher travel speeds when the lock-up clutch is engaged.

Auto lock-up

The lock-up clutch automatically engages according to ground speed and engine speed conditions. This feature is handled electronically and allows for increased travel speeds in the same gear.

Reduced shifting

The multiplication capability of the torque converter reduces the need for the operator to continually shift the transmission. This reduces operator effort and improves machine productivity.

All wheel drive (AWD)

All-wheel drive increases traction of the machine improving performance, handling and maneuverability. Delivering drive to all 4 wheel provides excellent power distribution and transfer of drive to the ground, reducing tire slippage and increasing machine capabilities in tough and challenging terrain.

Front and rear axles

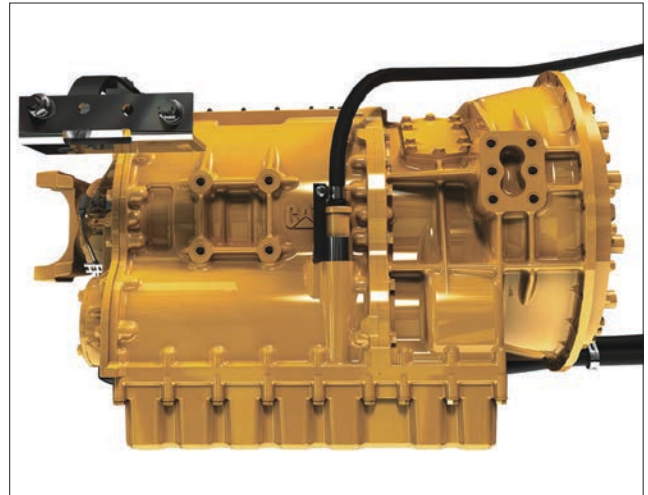

The front axle is suspended on an A-frame with a nitrogen charged suspension system rigidly mounted design with front suspension available as an option. The rear axle is rigidly mounted to the rear frame.

Tyres

Tyres are an integral part in a machine's ability to carry its load at higher speeds. Fitted with the larger 18:00R25 radial tyres ensures the WR820 stays within the tyres TKPH limits. This allows the machine to carry larger loads at faster speeds than conventional utility equipment.

Service brakes

Spring applied hydraulically released brake system. Brake components are oil immersed inside the axles, protecting them from contamination. Modulated braking provides smooth deceleration for precision stopping and operator control.

Parking brake

The parking brake is a spring applied oil released "fail to safe" enclosed wet disc on all 4-wheel ends.

Brake design

With large discs and plates for reliable, adjustment free operation and performance. Oil cooled disc brakes are completely enclosed to prevent contamination and reduce maintenance.

Emergency braking

When the WR820 safety system detects loss of critical drive pressure or brake pressure the operator will receive a warning and then the parking brake system will be safely apply.

Load sensing

A load sensing variable displacement pump and pressure compensating system continually monitor hydraulic power requirements, then provides power based on demand. This improves fuel economy and reduces emissions.

Other features include suction circuits, pump case-drain and steering return, filtered fan/brake pressure circuit, and closed loop hydraulic system.

FEATURE OVERVIEW

FOR IMPROVED RIDE CAPABILITY, SPEED AND PRODUCTIVITY UNDERGROUND.

● Standard ● Optional ● Safety

SWING OUT RADIATOR GRILL ●

Provides easy access to facilitate cleaning and maintenance on cooling system

INDEPENDENT BRAKE COOLING

Tank on RHS mudguard, and brakes in wheel ends

AUTO LUBRICATION PUMP

Automatically supplies grease to all lubricating points on machine

CLIMATE CONTROLLED ENCLOSED CABIN ●

SURFACE FEEDBACK ●

Pitch and roll data on ground conditions

CATERPILLAR POWERTRAIN

Proven Cat C11 Tier engine with CX31 Transmission

ROTATING BEACON

Multiple colours available

2x LED BEACONS

Front and rear of cab

FIXED HANDRAILS

Standard on all machines painted green

FOLDING HANDRAILS

Painted green (pictured)

BURST PROTECTION SHEATHING

Entire machine

HOSES AND HARNESSES BULK HEADED IN HITCH

HEATED MIRRORS

EMERGENCY STOP

With LED visual feedback

FIRE EXTINGUISHER

STEP TREADS

Painted in high visibility green

3-PIECE WHEEL RIMS

ALL WHEEL DRIVE

MACHINE ISOLATION

Located at ground level adjacent to operators cabin

FUEL CAP ISOLATION SYSTEM

AGITATOR HYDRAULIC MOTOR

Includes quick coupler hose connections

CENTRE MACHINE RETRIEVAL POINT

Painted red

MACHINE TIE DOWN POINTS

Painted red

AGITATOR BOWL AND VARIABLE SPEED CONTROL

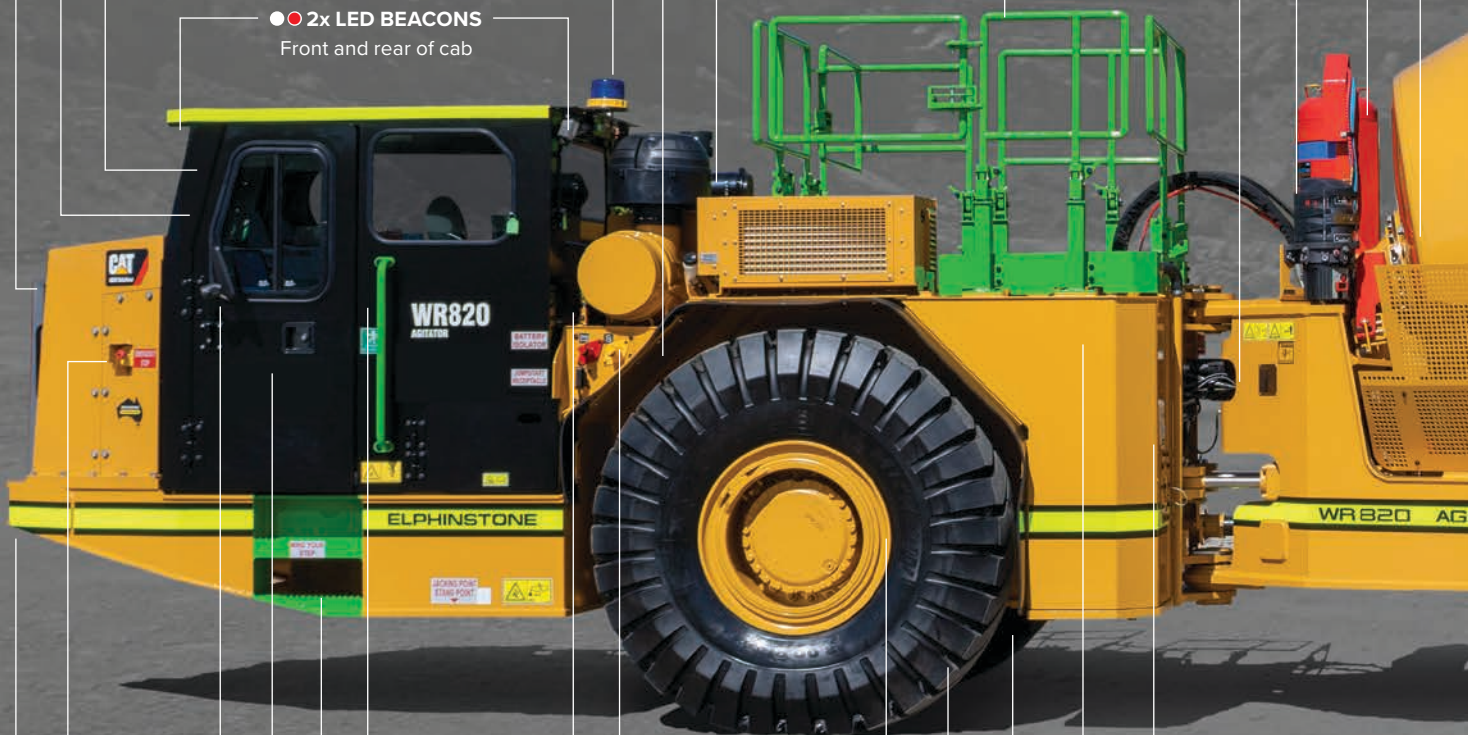

Provides a set range of variable control for drum speed from cabin and/or the RHS rear of the machine via tethered control

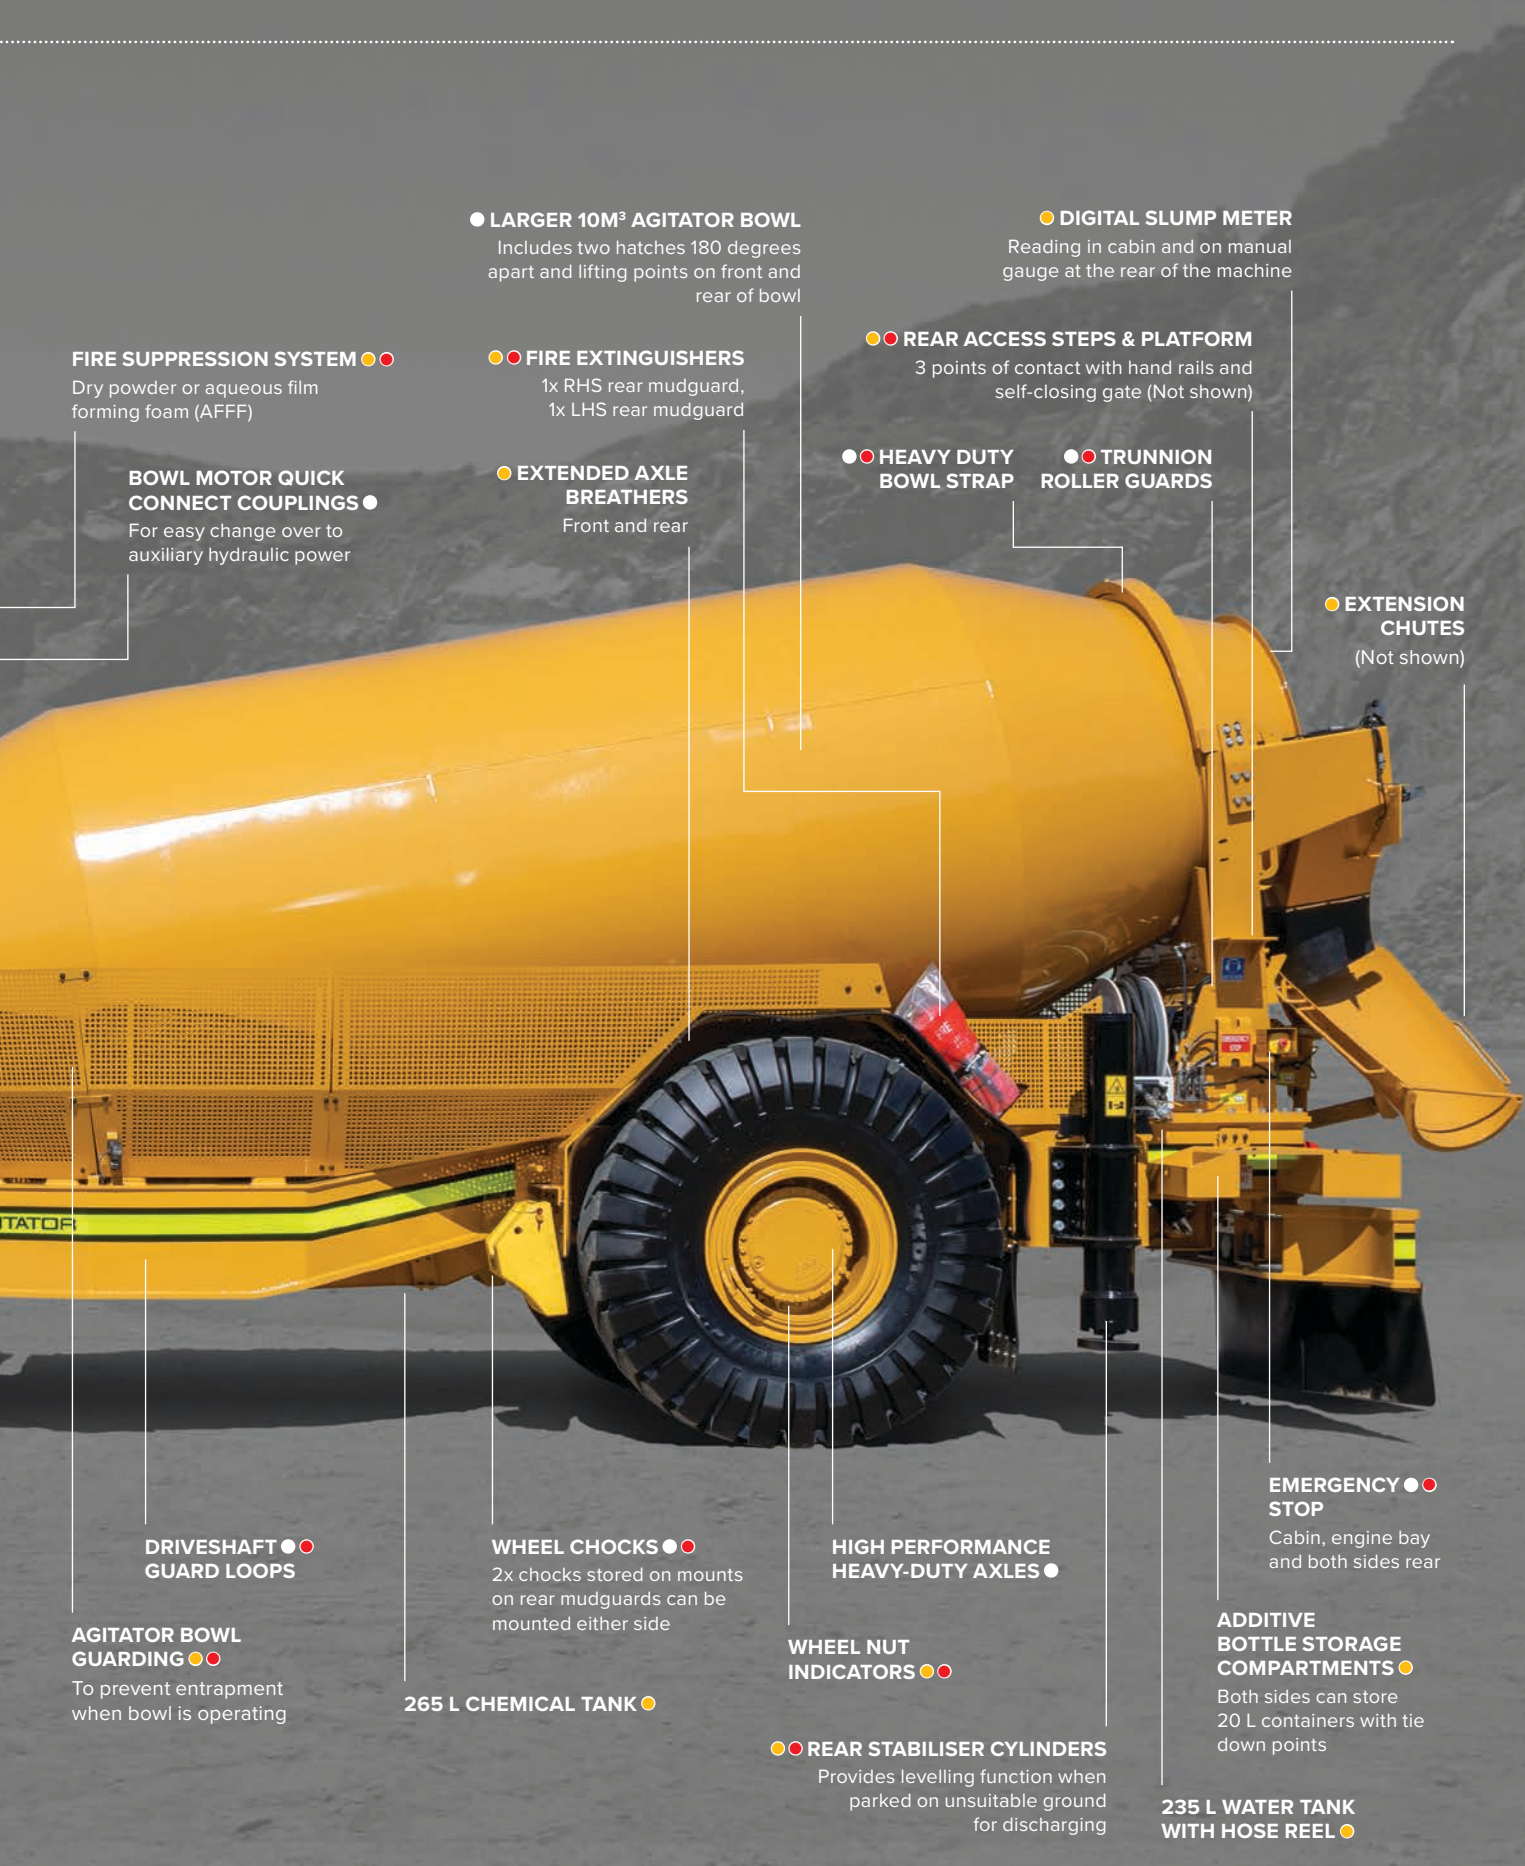

AGITATOR HYDRAULIC PUMP

Manual override for bowl discharge

FRONT SUSPENSION

Suspended front axle on A-Frame with nitrogen charged suspension system

FIRE SUPPRESSION SYSTEM

Dry powder or aqueous film forming foam (AFFF)

BOWL MOTOR QUICK CONNECT COUPLINGS

For easy change over to auxiliary hydraulic power

LARGER 10M³ AGITATOR BOWL

Includes two hatches 180 degrees apart and lifting points on front and rear of bowl

FIRE EXTINGUISHERS

1x RHS rear mudguard, 1x LHS rear mudguard

EXTENDED AXLE BREATHERS

Front and rear

REAR ACCESS STEPS & PLATFORM

3 points of contact with hand rails and self-closing gate (Not shown)

HEAVY DUTY BOWL STRAP

TRUNNION ROLLER GUARDS

EXTENSION CHUTES
(Not shown)

DRIVESHAFT GUARD LOOPS

AGITATOR BOWL GUARDING

To prevent entrapment when bowl is operating

WHEEL CHOCKS

2x chocks stored on mounts on rear mudguards can be mounted either side

265 L CHEMICAL TANK

HIGH PERFORMANCE HEAVY-DUTY AXLES

WHEEL NUT INDICATORS

REAR STABILISER CYLINDERS

Provides levelling function when parked on unsuitable ground for discharging

EMERGENCY STOP

Cabin, engine bay and both sides rear

ADDITIVE BOTTLE STORAGE COMPARTMENTS

Both sides can store 20 L containers with tie down points

235 L WATER TANK WITH HOSE REEL

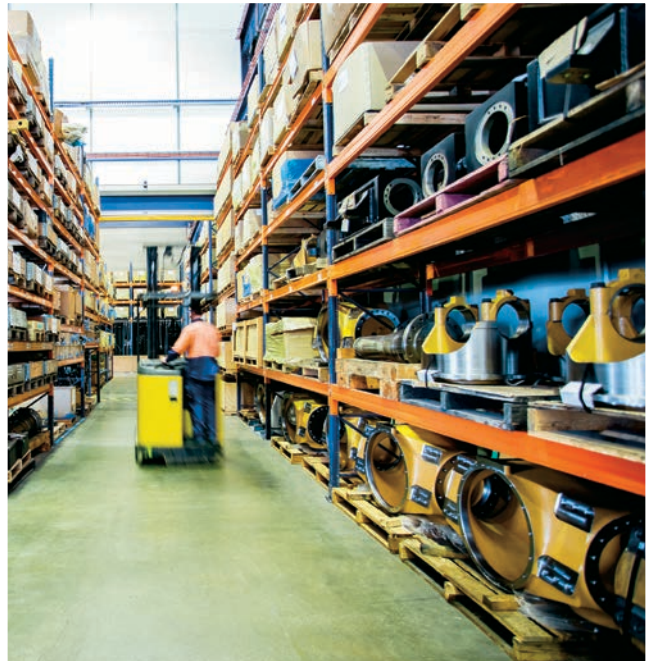

CUSTOMER SUPPORT

WHEN UPTIME REALLY COUNTS.

Renowned Cat dealer support

From helping you choose the right machine to financing and ongoing support, your Cat dealer provides the best in sales and service.

- ▶ Manage your costs with preventive maintenance programs like SOS™ fluids analysis, coolant sampling and guaranteed maintenance contracts.
- ▶ Stay productive with best-in-class parts availability.
- ▶ Your Cat dealer can also help you boost efficiency with operator training.
- ▶ When it's time for component replacement, your Cat dealer can help you save even more. Genuine Cat remanufactured parts carry the same warranty and reliability as new products at savings of 40 to 70 percent for powertrain and hydraulic components.

FUTURE SUSTAINABILITY

THINKING INTO THE FUTURE.

Sustainable waste and cost management

- ▶ Integrated machine systems and technologies improve productivity for greater accuracy, lower fuel use and reduced machine wear.
- ▶ Replaceable wear parts save maintenance time and cost, and extend major component life.
- ▶ Ecology drains help make draining fluids more convenient and help prevent spills.
- ▶ Major components are built to be rebuilt, eliminating waste and saving customers money by giving the machine and/or major components a second – and even third life.
- ▶ A variety of safety features help safeguard operators and others on the job site.

MAINTENANCE AND SERVICEABILITY

SERVICEABILITY MEANS MORE TIME FOR PRODUCTION.

Frame access

Steps and grab handles are standard on the engine end frame and cab for easy access to the service and operation areas.

Bolt-on guards.

Bolt-on belly guards offer protection to critical components, are hinged and easily removable for servicing.

Air filters

Radial seal air filters makes them easy to change, reducing air filter maintenance times. Filters and lubrication points are accessible from the ground without special tools. Remote lubrication points make daily attention to hard-to-reach joints easy.

Diagnostics

Electronic control system enables quick diagnosis of engine/transmission conditions and effective maintenance and repairs.

Pressure taps

Conveniently located for easy access to hydraulic system pressure measurements.

Spin-on oil filters

Spin-on fuel and engine oil filters shorten downtime.

Ecology drains

The hydraulic tank features ecology drains to make regular maintenance easier, and protect the environment from accidental oil spills.

Centralised service centre

Includes battery isolation and fluid sampling points as standard, with fast fill and evacuation points available as an option.

Electrical system

The 24V electrical system delivers a reliable electrical capacity for engine starting and additional lighting. Wiring circuits are colour coded and numbered for easy diagnosis and repair. All circuits are protected by circuit breakers. All harness connections have sealed electrical connectors to prevent moisture and dirt ingress. Harnesses are covered with fire resistant material for additional protection. All battery cables are double insulated for extra protection against rubbing.

On-board diagnostic systems

The monitoring system continuously checks all critical machine functions and components, and helps locate faults quickly for faster repair.

TECHNICAL SPECIFICATIONS
